FREE FORM POOL MEASURING METHOD.
 The shape of the pool is determined by selecting two points at some distance from the pool and measuring from those points to selected points around the perimeter of the pool.
 Select the two points at some convenient location (3'-0" minimum) from the edge of the pool. Point X and point Y should be, if possible, about 12 feet from each other. Be sure to indicate what the actual distance is between points X and Y. Next, measure the distance from each of those two points (X and Y) to points along the edge of the pool. Depending on the size of the pool and the curvatures, select points about 1 or 2 feet apart all the way around the pool. From these measurements, company engineers can get an accurate picture of the pool's shape and produce a liner that will fit.
